To protect streams within the City by controlling pest plants, supporting native biodiversity and filtering storm water

Hamilton City Council's vision is to support native biodiversity, control pest plants, slow down and filter storm water (improving water quality) and control stream and river bank erosion.

The areas considered are sites that have high value in regards to natural water treatment and sites with recent erosion problems highlighted in Hamilton City Council Activity Management Plans for the Major Streams and the Waikato River Education and practical outcomes relating to the restoration of privately owned gully areas.

This project recieved funding from the Waikato River Authority (WRA 12-039)
